

JUST SHIELD IT

Pests can damage your office. They may carry pathogens that can cause diseases. Pests can disrupt workflow, decrease productivity and harm your professional reputation.

But, what if you don't let your pests have access to your office? Instead, give them their pink slips and help make your office a better place to work.

Here comes "The Shield" for your Assets.

**"The shield to your workplace to make it a healthy place."**

## **Protection is everything!**

Post COVID-19 pandemic, most businesses now face the unprecedented challenge of sustaining maximum levels of hygiene and cleanliness. Consequently, elimination of pests becomes even more crucial. Overcoming these challenges require a correct approach along with the right technical expertise.

REX Pest Control offers comprehensive Disinfection Services in Gujarat. We protect your business as an essential service provider, with a focus to create better living conditions.

## **ABOUT REX**

REX Pest Control has been protecting businesses and homes for over three decades. REX takes pride in providing the highest standards of pest management with utmost environmental awareness.

At REX we offer a comprehensive range of pest management services. We are fully equipped with advanced technology to render effective pest control solutions under the supervision of competent professionals.

Our team of professionals actively demonstrate a safety-first attitude and remain committed to providing efficient and cost-effective solutions with an assurance of delivering exceptional quality.

## VISION

To set a benchmark in providing extensive pest control services that protects everyone.

To deliver unmatched customer satisfaction.

To provide exceptional extermination services in an economical, expedient and ethical manner.

## HOW REX WORKS

For more than three decades, we have specialized in controlling termites and other pests. Our approach is simple, we perform every job with our trademark quick response and attention to detail. We first analyze your problem and then provide a 100% effective solution for any pest related issues. As per current best practices and preventive measures, REX utilizes pesticides that are safe for humans, pets and the environment.

## RESIDENTIAL & COMMERCIAL PROJECTS

### Customization is REX's Specialization

REX offers the most effective, safe and reliable extermination services for workplaces. Every time one calls to book an appointment, a dedicated client servicing executive caters to their varied needs by offering customized options. These options offer a range of pest control programs, best suited to the client's budgets. Our team of highly efficient and well-trained technicians ensure your workplace remains pest-free.

**INSPECT**  
**CONSULT**  
**ELIMINATE**

**A SHIELD, GUARANTEED!**

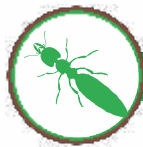

## SERVICES

REX creates a well-integrated Pest Management & Prevention program for your workplace. A program addressing your needs and requirements based on a detailed inspection of the premises.

### Major Services

#### Termite Control Services

Being India's number one **Termite Control Service Provider**, REX uses termite treatment by the means of chemical barrier technology, the latest one in the industry. The chemical we utilize is **100%** safe for humans and the environment. Accredited by the **Central Insecticide Board (CIB)** for its non-toxic and safety quotient standards.

##### Pre-Construction Termite Treatment

Treating the soil before slab placement with insecticides is the most common method of termite treatment. It forms a chemical barrier between the ground slab and masonry preventing the insects from approaching the building.

##### Post Construction Termite Treatment

Treatment of subterranean termites is done by treating the soil adjacent to or under the building with a product which kills or repels termites. This treatment consists of drilling holes and filling it with a recommended pesticide emulsion and sealing the holes after treatment.

**World's No. 1 Technology  
for Termite Detection**

## Integrated Pest Management

Integrated Pest Management (IPM) prevents pests by employing non-toxic methodologies like biological, structural or cultural and decreasing the use of the toxic products.

### Cockroaches Management

To prevent cockroach infestations, it is essential to reduce food and water sources as well as their known and potential hiding places. With prolonged access to food, even baits (used as primary control tools) may take longer to provide satisfactory control.

### Rodent Infestation Management

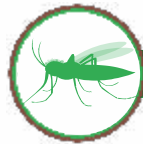

Prevention and treatment of rodent infestations require elimination of access points for rats and mice, as well as removal of food sources and shelter options by using traps to get rid of existing rodents in and around your homes and workplaces.

#### Rodent Elimination Treatment

In areas outside the buildings, when required, we use glue pads and carry out fumigation of burrows. A relatively safe and highly effective single dose anticoagulant rodenticide with the active ingredient known as “**BROMADIOLONE**” is used in gardens and similar areas where the usage of rodenticides is permissible by law.

#### Rodent Repellent Treatment

Repellent spray and pouches.

### Mosquitoes Management

- Space Treatment
- Larvicide Treatment
- Fogging Treatment

### Crawling Insects Management

Treatment of crawling insects like

- Ants
- Ghost Ants

## Fumigation

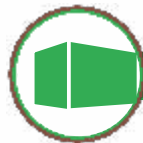

REX is a specialist in treatment of  
**All Commodities and all types of Cargo Containers**

**REX is authorized by the Government of India to affix the IPPC/ISPM mark. Methyl Bromide (MB) and Aluminium Phosphide (ALP) by trained and certified operators.**

### Export Container Fumigation

Fumigation is a procedure that is used throughout the world to eradicate pests that infest all types of goods, commodities, warehouses, processing factories and transport vehicles including ships and their cargoes. Container fumigation involves treating contents of a given container and eliminating pests, making it ready for import and export.

### Stack Fumigation

Packing materials such as PP bags and laminated bags minimize the gas penetration often leading to the failure of fumigation. Quarantine authorities strongly recommend packing cotton bags and gunny bags that easily allow gas circulation inside the bags and allowing more space in the CFS/warehouse. This stack is covered with gas proof tarpaulins and it is made air tight with the help of sand snakes. On arrival of the quarantine officer, the said shipment is fumigated under his supervision with Methyl Bromide (MB) @dosage of 32 gms/m.t and Aluminium Phosphide (ALP) @dosage of 09 gms/m.t.

## Disinfection Services

REX utilizes a disinfectant product that has microbial disinfecting properties. Aerial disinfection procedure is carried out with this disinfectant solution by using **Ultra Low Volume (ULV)** specialized machines. This is a different process compared to a regular pest control service.

The product is non-carcinogenic and non-mutagenic. It is a **US Food & Drug Association (USFDA)** approved formulation. REX has carefully selected the disinfectant solution to ensure safety and health of our teams and clients.

## World's Latest Technology for Virus Detection & Sanitization Verification System

**Ensure™** Touch is an advanced monitoring system that collects, analyzes and reports data from a variety of long trusted quality tests, providing rapid and accurate sanitization verification data.

## OTHER SPECIAL SERVICES

-  **Termite Treatment (Pre/Post)**
-  **Larvicide Treatment**
